

## Systemic Therapy Protocol Scheduling Guide

The Systemic Therapy Protocol Scheduling Guide is designed to assist healthcare professionals in determining the appropriate amount of nursing time and chair time required for BC Cancer protocols. This guide aims to standardize care across the province by providing a default amount of time for scheduling systemic therapy patients. The guide is intended for use by scheduling staff, nurses, and other healthcare professionals involved in the care of systemic therapy patients.

This guide should be used alongside the protocol, nursing and clinical judgment, and consideration for individual circumstances for each patient's care and treatment schedule. This is a planning tool to guide best practice in scheduling and should not be used without operational and patient specific consideration.

The Nurse and Chair times are specific to the protocol as well as the day and cycle. The times outlined in this guide have been developed using an established methodology based on clinical best practices and expert consensus. This methodology considers the typical time required for various nursing and infusion activities associated with each protocol and has an internal review process for optimal planning of resources.

This guide will be updated regularly to reflect new protocols and revised scheduling times. Protocols can be found on the [BC Cancer website](#).

### Definitions:

**Chair Time:** the amount of time the systemic therapy chair is to be allocated to the patient. This time accounts for all task and infusion activities associated with the protocol for the average patient, i.e., does not account for complications or operational discrepancies.

**Nurse Time:** the amount of time a nurse will need to complete nursing task activities to start a patient's treatment before diverting attention to the next patient.

This time does not include potential requirements such as additional vitals or tasks and support. Also, referred to as "up front" nursing time.

Newest changes will be in blue font.

*Warning: The information contained in these documents are a statement of consensus of BC Cancer professionals regarding their views of currently accepted approaches to treatment. Any clinician seeking to apply or consult these documents is expected to use independent medical judgement in the context of individual clinical circumstances to determine any patient's care or treatment. Use of these documents is at your own risk and is subject to BC Cancer's terms of use available at [www.bccancer.bc.ca/terms-of-use](http://www.bccancer.bc.ca/terms-of-use)*
